

Anne St. Road Improvements

Client: City of Barrie

Location: Dunlop Street West to Essa Road

Services: Class Environmental Assessment, Detailed Design of Roadworks, Project Management, Contract Administration, Surveying

The City of Barrie retained the services of The Jones Consulting Group to undertake an Environmental Assessment and design for the road widening of Anne Street from Dunlop Street West to Essa Road. Five alternatives were investigated, taking into consideration the physical, social and economic environment of the area. A public meeting was held for businesses and residents in the study area to express concerns and preferences.

The Jones Consulting Group was also retained to complete the detailed design of the road widening of Anne Street from Dunlop West to Tiffin Street, which included three major watercourse crossings. Ministry of the Environment applications for box-culverts at the crossings were completed. Oil-grit separators were installed to ensure water quality control before runoff enters the creek. Jones has also designed a section of the transmission water main line from Dunlop Street to Jacob Street.

Ultimately, approximately 1200m of Anne Street is to be widened to a five lane major arterial road in order to convey traffic in the north/south direction. The Jones Consulting Group is a major component for the success of this project.
