

# RVH Expansion

**Client: Royal Victoria Hospital**

**Location: Georgian Drive, Barrie**

**Services: Site Servicing Plan, Stormwater Management**

As part of the Royal Victoria Hospital expansion, costing several hundred million dollars, The Jones Consulting Group was retained to complete the civil engineering portion of the design work including revisions to grading, stormwater management, sanitary servicing, and water distribution systems both on the hospital lands and municipal right-of-ways. Phasing of the work is critical to maintain access and services to the hospital during all phases of construction. RVH is located just east of the Georgian College on Georgian Drive. The site is approximately 15.70 hectares in area and is located on the southern side of Georgian Drive in the northern part of Barrie.

Further to the hospital expansion, RVH was outfitted with a temporary cancer radiation treatment suite - a first for the Province. This unique facility required grading, water distribution, and sanitary servicing design work for the first phase of the hospital expansion.
